How to use my Application

Concepts

- Spoilers : Hidden text hat will appear afterwards

- Slides : As markdown doesn't support "page jumps" I use things called slides

- Markdown : Understanding markdown syntax is recommended if not needed ([Markdown website](#))

What does it do ?

- It takes a markdown file as input

- It outputs the formated file with its spoiler

How to use "spoilers"

- In your markdown file, just put your text between "@" to make it a spoiler:

Markdown file	Displayed
this is a @ test @	this is a ....

How to use "slides"

- In your markdown file, just put "===" with an empty line before and after
- The number of slides will be shown at the bottom right of your screen

Using spoilers arguments

You can add characters after the first '@' which opens your spoiler such as:

- '/' which skips whitespaces (' ')
- '_' which replace dots ('.') with underscore ('_')

Markdown file	Displayed
this is @ a test @	this is .. ..
this is @/ a test @	this is ....
this is @_ a test @	this is __ _____
this is @/_ a test @	this is _____

Default keybindings

Key	Usage
RightArrow	Show next spoiler or go down if none is found
LeftArrow	Hide spoiler or go up if none is found
n	Go to next slide
p	Go to previous slide
z	Increase font size
Z	Decrease font size

User Interface

- To open a markdown file, just press the button and select your file

- If you want to open a word (.docx) file see the next section

- If you are editing the file while using it in Helium, you can reload it using the "Reload" button to see changes

- You can open the currently selected file in your default text editor using the corresponding button

- You can also switch the state (displayed/hidden) of a spoiler by clicking on it

Settings

- **Settings are not saved in-between sessions**

- You can open your file in dillinger using the "open with web editor" button

- You can import files from word format using pandoc if downloaded (you may need to make some changes to markdown file)

- You can report bugs using the button, which leads you to the github issue page

- You can change font-family (more to be added)

Pandoc not installed can lead to some crashes.

Thanks for using it !

You can still contact me at github.asleep687@passinbox.com

I am open for any feature request
